PROFILE

A passionate freelancer providing service related to full stack web development, Software Quality Assurance, Database Management sectors. Additionally, have hands on experience with different projects in Software Engineering, data analysis and customer support roles.

I have strong interest about Artificial Intelligence, with a focus on advancing the state-of-the-art in language understanding and generation. My research interests lies at the intersection of deep learning and computational linguistics, exploring how machines can better comprehend and produce human language. Through my work, I aim to contribute to the development of more accessible, interpretable and trustworthy technologies that can benefit society.
